Member of Technical Staff, Security | Wafer

Cover letter

Hi Wafer team,

I call myself a technomancer because technology felt like magic to me as a kid. With security work, the part I enjoy is taking something that feels mysterious and making it testable. Your Security role caught my eye because it asks engineers to build the fix, not just file the finding.

At Technomancy IT, I've built OAuth and OIDC flows, tenant-aware access and integrations with authenticated service boundaries. On ProofMark, I worked across signing, identity and audit history, where making the state and fallback paths explicit was part of getting the design right. At Front Range Internet, I led NOC escalations and ran SOC 1 and SOC 2 audits. Explaining a control to an auditor and being on call when it failed taught me to care about what we could actually verify.

I'd bring that mix of application engineering and operational follow-through to the systems around Wafer's inference cloud. My background is in production application and infrastructure security, not inference-specific security, and I'd be excited to learn that stack alongside your engineers. I'm open to relocating to San Francisco for the onsite role.

Thanks,
Chad Koslovsky
